OUR CORE COMPETENCIES

Through continuous investment in research and development, we have been able to extend our core competence in the field of water management additionally to our original core skill of stainless steel machining and the development of carefully thought out product solutions for sanitary rooms.

Our development work focuses on sustainability and creating solutions for our customers needs. That may be through innovative fittings that focus on water and energy saving, comfort and improved maintenance, or it may be through optimisation of hygiene, e.g. our InoxPlus surface coating for stainless steel. Whichever of these it might be, we are aware of our responsibilities and aim to satisfy precise needs. This is also demonstrated when we develop and produce customer-specific solutions.

AQUA 3000 open - water management

With the AQUA 3000 water management system, it is possible to integrate sanitary equipment into building automation to achieve central and hygienic control of the entire process of dispensing water. The two levels of our system are sub-divided into

- fittings
- network

Touch-free - clean solutions for sanitary rooms

For optimum sanitary hygiene, Franke Water Systems offers a comprehensive range of touch-free equipment

- Sanitary equipment
- Stainless steel accessories with infrared proximity technology
- Opto-electronic washbasin and urinal flushing equipment

Bespoke solutions

Wherever standard solutions do not work, or where they fail to satisfy the requirements, Franke Water Systems can provide the specialist knowledge and capabilities to develop, plan, design and create solutions that cover the needs of architects, planners and investors.

Beauty is always welcome everywhere – even in the washroom in a hotel reception.

Aesthetic appeal and water saving fitting are important criteria in the sanitary facilities of a modern hotel as well as the need for high standards of hygiene. Clear lines and shapes give guests the feel-good factor, and the sense of well being. The touch-free fittings and high-quality materials are cost effective and also easy to look after.

With Franke, every guest really does feel welcome, and the special aesthetics create a truly memorable atmosphere.

Step in and enjoy an all-round sense of well-being – the bathroom bears the hallmark of personal wellness for you.

Today a bathroom is so much more than a functional space. The bathroom in a hotel has become a living space and a feel-good area. Guests retain a memory of it as a central criterion in their experience of a hotel visit. Exciting as well as functional designs and high-quality materials that are easy to clean help to make the bathroom into a haven of well-being.

Cost-effectiveness and aesthetics are not contradictory terms - just ask us, and we shall be pleased to advise you.

Great durability combined with reliable operation, cost-effectiveness and comfort for professional shower facilities.

In sports buildings and schools, sanitary facilities are every bit as important as the sports facilities themselves. As well as sophisticated and timeless design, characteristics such as economical use of water, hygiene, safety and comfort are also important. You can protect your investments with robust, durable shower facilities.

We are pleased to help you with the planning and can take into consideration important functions such as preventive measures against Legionella bacteria and protection against scalding.

Ideal washroom solutions for the health of your employees.

Modern employees pretty much take the provision of clean, hygienic and comfortable washrooms for granted. And they are right to do so, since total commitment and conscientious work must be rewarded. Inviting while also durable and hard-wearing sanitary facilities should be as much a part of a modern company as leading-edge technologies in production.

Parameters such as low maintenance and service costs, energy-saving fittings and comfort define the basis of our product range. We can support you with all central decision-making criteria.

Visits with a long-term impact - a showcase for customers and employees alike.

Washrooms in office buildings project company values to visitors while also constituting an elementary feel-good factor to employees, that can have a motivating impact on them. Defined shapes and easy to clean surfaces based on contemporary designs support a friendly atmosphere in a hygienic environment and help to reduce costs.

Take charge of your own image and provide a level of personal flair and exclusivity. We can support you with unique products, high-quality details and instantly identifiable concepts.

With the new EXOS. system line, Franke Water Systems offers an end-to-end design and implementation concept, from washbasin to soap dispenser - also for wheelchair accessible areas.

A pit stop known to everyone – and one that everyone should remember as having been a positive and clean experience.

Nowhere is there such an anonymous coming and going of people in WC facilities as you encounter in motorway service stations. It takes robust and easy to clean sanitary facilities to deliver longevity, hygiene and protection against wilful destruction.

As well as high-quality materials that guarantee cleanliness and functional safety, we can also offer you solutions to prevent damage caused by vandalism. Just ask us about the Franke Heavy-Duty Line.

MATERIALS

To satisfy requirements governing hygiene, functionality, durability, resistance to damage, safety, aesthetics and design, we work primarily with the following materials:

Stainless steel

There are good reasons why stainless steel is our material of choice for facilities in public and semi-public sanitary facilities. This high-quality material combines stylish aesthetics with functionality and long service life. It can be combined and complemented perfectly with materials such as glass and ceramics. Stainless steel is a material capable of absorbing and reflecting the light and colours of its environment. Stainless steel products can be integrated easily into almost any room environment. This material really does set the tone.

Stainless steel with InoxPlus surface finish

With the surface finish of InoxPlus, Franke has succeeded in further enhancing the existing properties of stainless steel. Fingerprint marks, previously a stubborn problem on stainless steel, are now a thing of the past. This is a technology involving the use of nano-particles, which bond with molecules on the surface of the metal and therefore smooth out tiny microscopic irregularities. The result takes the form of surfaces that are easy to clean and that resist fingerprint marks, thanks to their in-depth surface enhancement.

MIRANIT

These sanitary equipment products, made of a shatter-proof mineral-based and synthetic resin-bonded material MIRANIT are ideally suited to the modern and at the same time aesthetically pleasing interior appointment of sanitary facilities.

MIRANIT products are quite literally cast in one piece, with no adhesive seams and joints and deliver convincing properties such as great stability and an elegant appearance. The smooth, pore-free, hygienic and easily cleanable gel-coated surface also provides exceptional durability and resistance.

ESG glass

Single-glazed safety glass is a material that, like stainless steel, impresses by virtue of its timeless character and its ability to combine with other materials. Glass and stainless steel represent outstanding quality and timeless elegance. Both materials now form essential components of contemporary interior design. This is why a deliberate combination of these two materials is particularly appealing to the eye.

FRANKE WATER SYSTEMS

Franke Group

Franke Water Systems is a member of the Franke Group, headquartered in Switzerland. The Group comprises four other divisions: Franke Kitchen Systems, Franke Foodservice Systems, Franke Coffee Systems and Franke Beverage Systems.

Global sales

The production facilities and the product/technology development function are based on Europe, South Africa, Canada and the United Arab Emirates.

The Franke Water Systems division has its own global sales operation.

Brief history

The origins of Franke Water Systems lie in the tinsmith and plumbing business established in Switzerland back in 1911. Today, the Franke division Water Systems is the world's leading provider of turnkey solutions in the sanitary sector. Intelligent washroom and sanitary solutions for the public, semi-public and private sectors.
